References External links Category:Digital television Category:Television technology Category:Remote control Epithelioma cuniculatum and epithelioma cuniculatum-like carcinoma in a young girl. We describe a case of unusual intracranial epithelioma cuniculatum-like malignant tumor occurring in a 5-year-old girl. The features of this unusual tumor differentiate it from other benign or malignant tumors and show an aggressive behavior with recurrence and death. Possible metastasis may occur within 1 year of the initial surgery. Q: Flexbox element with no height for all but the bottom, breaks in Safari I have the following flexbox setup: * { box-sizing: border-box; } .container { display: flex; flex-direction: column; width: 100%; height: 100%; } .cell { padding: 10px; margin: 10px; flex: 1; flex-shrink: 0; } Some content The problem is: I only want a horizontal scrollbar for the middle. If I remove: height: 100%; I get a vertical scrollbar, but the height is set to 100% and therefore the browser is displaying a full-height cell. If I then set the height, the layout collapses. How can I set the height to exactly 100px (i.e. I don't want to put a fixed height, just have the bottom border of the elements always disappear) while keeping the layout "full width"
