Fx2k Radio Decoder Professional Download Free Sometime in May, I purchased a Bluetooth radio scanner in my internet cart, but I don't remember. It says "Fx2k". When I plug it in it makes several beeps and a few other sounds that I do not recognize. It has an antenna that can be attached or removed like any other scanner. It is 16x16 pixels with a file named "Radio Test.snd" which is a sound. The trouble is that after connecting it to an iPhone, you can't get it to make an audible beep or sound. The test pattern works fine on the iPhone but when you hook it up to the Bluetooth, it does not make the beep or sound. The original label on the box says "Fx2k Radio Decoder". The brand name of the scanner seems to be "Radio Test" and "Radio Test Professional".. It also came with a 5 volt square (not full sized) power supply. I do not recall where I purchased this radio scanner. I want to know more information about this scanner. I'm just trying to figure out what the scanner can or cannot do. I'm wondering if it has an rf ID code, a list of frequencies, codes. How does it work, does it have a speaker? Can it be programmed to play a certain sound or frequency? How is this scanner programmed? I want to use this scanner to play a back channel with my iPhone if that's possible to do with this scanner? Any information or help would be great. If you would like more information about this scanner or even read the manual for the scanner please let me know. Thank you in advance. Best wishes, Christine Any help will be greatly appreciated. Hi, I am really new into usb programming. So I have
