See the Synthesizer - Description chart for this module for detailed descriptions of each feature. Multiple note configurations This Synthesizer module provides 32 note percussion sounds. Click the voice

button to hear different pitches of the same percussion sound. You can create a different percussion sound by starting each voice with a different note. All notes will be played simultaneously, so you can play chords with different notes. The Sound synthesis rates (how fast a synth plays notes) can be controlled from the Meta screen. Click on the triangle button to switch between stereo and mono synthesis. -The stereo/mono button is only available in multi patch mode or when using the Sound Generator module (BIG CONTROL ONLY) -In mono mode, the synth will play all notes together, so each note is pitched all the way to the extreme frequencies. External Synthesizer.EXE programs are provided in the download for the DS DrumScan and DS PercussionScan modules, allowing you to create sounds quickly and easily! The Synthesizer Studio software includes a free version of EXS24, the world's most popular production library. EXS24 provides an extensive library of hundreds of ready to use drums and percussion instruments for thousands of samples available for download. The MultiDelay module provides efficient delay line with 3 taps and damping. • It functions as 3 independent delays. • It supports the "3-tap" and "continuous" delaying function. • The "damping" function can be added to the "3-tap" delay function. Performance: Input sensitivity: • The sensitivity of a "single tap" delay is about 60 dB. • The sensitivity of a "3-tap" delay is about 48 dB. Delay Time: Input frequency: • The delay time of a "single tap" delay is about 4 ms. • The delay time of a "3-tap" delay is about 1.5 ms. A sequence of taps: • The delay time of a "3-tap" delay with a sequence of a is about 1.5 ms (2/3). Measurement time: Input frequency: • Measurement time is about 1/3 of the "single tap" delay time (50 Hz). • Measurement time is about 1/3 of the "3-tap" delay time (50 Hz). Using the "Continuous" function: Input frequency: • The delay time of a "3-tap" delay with a sequence of one tap is about the same time (about 1.5 ms). Using the "damping" function: Input frequency: • The delay time of a "3-tap" delay with a sequence of one tap is about 0.5 ms. • The delay time of a "3-tap" delay with a sequence of one tap is about 0.5 ms.
