File:Sonic & Knuckles Adventure.zip Sonic & Knuckles Adventure Description: A couple of years ago, Sonic Team released a game on the PC called Sonic & Knuckles. The idea behind this game was to return to the 16-bit era of Sonic the Hedgehog games, the era of the Sega Genesis. The game would follow Sonic and his pals on a quest to go to the island of Mobius, discover the mysteries of the world and save the earth from being frozen over by Dr. Eggman. Sonic & Knuckles Adventure Game Free Download is the remake of the original Sonic & Knuckles game. This version of the game will contain 20 levels, 10 bonus levels, and a character select screen. A computer player would be able to select a character at the character select screen, and then would have to play the game. The game is almost identical to the original game, with one exception. The sound quality has been improved, as it

A: Adobe Acrobat is a PDF editor. But I'm guessing you're looking for a simple text editor with basic formatting options. Notepad++ is a really good free text editor. Q: Parsing JSON string of nested value using Android I am using this code to retrieve data from the database `String cursor = "select * from settings where app_name='"+app_name+"'"; String data = CursorAdapter.urunList.getString(cursor);` and this code to parse it: `JSONObject json = new JSONObject(data);` Now my problem is that data contains some JSON string which is nested and I am not able to parse it. The output of data is: `{ "app_name": "xxx.xxx.xxx.xxx" }` but the app_name field contains a string which is nested (I mean it contains some other value which i have to read to get the real value: `{ "android": "xxx.xxx.xxx.xxx", "android_version": "6.0.0" }`) the code I used to get the android_version is: `String android_version = json.getString("android");` and it returns null. I think that the problem is that the android_version is nested inside the android value and I am not able to get it. Please anyone help me on this. A: I think you need to get the android value first, then get android_version. `JSONObject root = new JSONObject(data); JSONObject android = root.getJSONObject("android"); JSONObject android_version = android.getJSONObject("android_version");` by Gordan Meldrum (6.7-5.1) "What is
