FMSLogo is a simple to use, easy to understand and powerful Logo® programming language. It offers a set of sophisticated commands that are capable of performing different operations on screen objects. This way, you can write commands to animate the movement of the Turtle, use it to draw circles, triangles, squares, polygons, ellipses, or ovals, or use it to draw a variety of complex objects. It also features an easy-to-use console where you can write commands and run them with one click. The program sports an intuitive interface with built-in help to provide quick access to the dedicated console where you can write commands and run them in just one click. You can control pen size, thickness and color, customize the commands written in the console in terms of font style, size and color, and zoom in or out. Moreover, the tool provides a set of useful buttons which are positioned near the console. This way, you can execute commands, trace all the procedures, stop the program from processing the instructions, and pause the process for examining variables or making changes. You can use the program to write several simple data structures such as arrays, lists and tables, or you can write macros that you can use for re-using code. FMSLogo has been tested on all Windows platforms including Windows 7 and Windows 8, as well as 64-bit and 32-bit systems and it was found to perform without any troubles. FMSLogo Features: - Logo commands - Turtle on screen - Help on screen - Arrow keys - Zoom in and out - Customized commands - Reset - Help on keyboard - Autoscroll - Autoscroll in background - Autoscroll with keyboard - Autoscroll full window - Line selection mode - Line colour selection - Tilt left or right - Tilt up or down - Tilt 90 degrees - Tilt horizontal or vertical - Left click on empty screen - Right click on empty screen - Line hit test - Zoom in or out - Reset the screen - Reset the screen size - Resume - Step through the code - Stop - Toggle line visibility - Close - Toggle line visibility - Reset the pen size - Reset the pen size - Reset the pen color - Reset the pen color - Reset the pen thickness - Reset the pen thickness - Reset the pen thickness - Reset the pen

FMSLogo is a lightweight Windows utility that provides an intuitive working environment for helping you use the Logo programming language for learning different subjects. This application aims at providing users with a simple solution for learning them how to program. It features a powerful set of commands for manipulating a screen object called a “turtle” which allows users to produce line graphics. It sports a clean and straightforward GUI that offers quick access to the dedicated pane where you can insert commands. This way, you can draw lines, triangles, squares, polygons, or other objects. The application enables users to insert image files, print or save the generated information to BMP or GIF format, select the pen size, thickness and color, customize the commands written in the console in terms of font style, size and color, as well as zoom in or out. Furthermore, the tool provides a set of useful buttons which are positioned near the console. This way, you can easily execute commands, trace all the procedures, stop the program from processing the instructions, and pause the process for examining variables or making changes. FMSLogo gives users the possibility to insert a wide range of commands related to different subjects or fields, such as data structure (e.g. selectors, predicated, queries), communication (e.g. transmitters, receivers, file access, hardware and DLL communications), arithmetic operations (numeric operation, random numbers), logical operations, macro commands, as well as directory, Windows, networking, or multimedia commands. During our testing we have noticed that the program carries out a task very quickly and without errors throughout the entire process. It manages to remain light on the system resources, so it doesn't hamper computer performance, nor interfere with other applications' functionality. All in all, FMSLogo is a handy application designed to help you learn the Logo programming language quickly and with minimum effort. Thanks to its intuitive layout, it is suitable even for less experienced users.

Reviews of FMSLogo - wazaentertainment.com 8.1 Overall Reviewed:1/27/2014 Rating: 10 10 When I first downloaded FMSLogo it took me a few minutes to understand that it was NOT a graphics program. I had been asked to help an old friend learn Logo and this was the only program he knew how to use. Now, I'm not a programmer, but I've been teaching Logo for over 25 years, and can grasp the concepts of a simple Logo program quickly. The tutorial is well written and has many very good ideas about how to create Logo programs. When I could complete the first program, it took just over an hour. The program I produced can be downloaded free at LogoFile. - dvd-on-dvd
