1987. G3.[Migration level of patients with type 2 diabetes mellitus in Jiangxi province]. To determine the migration level and related risk factors for patients with type 2 diabetes mellitus (T2DM) in Jiangxi province and explore their behavior and management. A total of 15 988 patients with T2DM, diagnosed based on the 2010 new diagnostic criteria for diabetes mellitus (2010 criteria), were registered in a national register database in Jiangxi province during 2011, and the demographic information and information on the migration status of the patients were recorded. The multinomial logistic regression was used to analyze the risk factors of the patients' migration. Of the 15 988 patients, 4 125 (26.1%) had moved to other counties, city or other province and 8,863(53.9%) lived in their hometown. Patients who moved to other counties or cities were older than those who did not ( $P=0.003$ ). The proportions of patients with T2DM who moved to other county or cities and to other province were higher than those who remained in their hometown, while those who moved to another province were lower than those f30f4ceada
