Reader comments Unarchiver One I usually use Winrar or WinZip as my compression app, but with winrar I have to go to the options to make the archive, while with WinZip it just does it. I'm looking for something that will work the same way for both. Also, I wish there were more options to choose from in the decompression. Right now the choice is either 'Bzip2' or 'Uncompressed', with no other options. Re: Unarchiver One Hello, Winrar does not support the compression of files. WinZip does. You could try Winzip, it is my favorite compression app. Also Winzip offers several more types of compression than Winrar. Winrar is restricted to bzip2 only. In all compressions it does an excellent job. Of course, Unarchiver One and Winzip do the same job. You are free to choose whichever you like, no matter how compressed the file is. If the file is compressed with bzip2, Unarchiver One will not decompress it any better than Winzip. As for your preferences. You could try several compression formats: Gzip Bzip2 Rar Rar4 Ace

I had no idea what to do other than drag & drop the file onto the app. I made some minor modifications to the file before I tried this app out so the modifications were deleted. The file is extracted with no problems and the modifications are there. It's far too simple to try to con someone to buy. But I'm just really glad it worked. After you create the archive, it's easily shared on a server. I have no idea why there isn't a rating higher than 5. As for the price, it's free. If I were you I'd try this app out and see if it's for you. I'd be willing to bet that you'll get more out of this app than I did. I'm sure that novices will not be able to figure it out.

Total Unarchiver is a useful tool that can both extract and compress archive files (such as ZIP, RAR, 7Z, XZ, BZIP2, CAB, GZIP, ARJ, WIM, LZH, ISO, NSIS, MSI,...). A typical archive contains folders that you can open and explore to find any files that interest you. To create an archive, you will just need to drag and drop the items you want in a folder, with a single click. The extracted files are automatically listed in a tree, ready to be examined at any time. The compressed files are also displayed in a list, from which you can choose the ones you want to add to the archive. Moreover, Total Unarchiver is capable of applying various compression/decompression techniques on multiple files. After you have selected the files you want to include in your archive, you can choose between creating a new archive or extracting the contents of an existing archive. For the latter case, the extracted files are listed in a tree to make it easier to inspect them or save them in other archives. Once your archive is ready, you can share it via FTP and email.
