USB Hidden Copier Free Download [Mac/Win] Latest

USB Hidden Copier is a free tool to backup your USB storage devices. The program offers a simple and easy-to-use interface and quickly copies any data from any USB device to a local folder. As soon as USB device is connected, the backup process starts automatically. USB Hidden Copier is a suitable solution for automatically backing up data from any USB memory device that you connect to your computer. The application can work silently and automatically backup the data from USB devices to your computer. You may select the types of files to be copied. USB monitoring purposes USB Hidden Copier is capable of silently duplicating the specified types of files from any USB device connected to your computer. This way, you can monitor the contents of USB memory devices for all the people who use your computer. It stores the duplicate data in a local folder, so you can easily inspect it later. Its main purpose is to allow you to identify the source of viruses, malware or other malicious applications that can infect your computer, without you knowing. Additionally, it is a suitable monitoring tool for public computers, such as those in a school, in universities, institutions or at the workplace. A tool that automates data backup USB Hidden Copier is designed to run on Windows startup and automatically activate the backing up process as soon as you connect a USB device to your computer. Alternatively, you may manually activate/deactivate it. Moreover, the application allows you to select the local folder for data storage. You can select the types of files which you wish the application to copy: pictures, documents, multimedia or other types files except for these. Otherwise, you may choose "All" and thus disable any file filters. You may set the software to ignore a particular device, for example your own, in order to avoid unnecessary space occupation. Lightweight USB copier USB Hidden Copier is simple to use, lightweight and easy to install. It also features a shortcut to viewing the default folder for data storage, however, in many cases the files are not copied in the specified directory. The data can be accessed from the application's installation folder, where the program creates specific subfolders with the name of the USB.
