Category:Ransomware Category:2011 softwareQ: How to launch a.xib file from a storyboard? In a storyboard, I have a view with a view controller embedded in it, which is configured in the storyboard (link). Now, in the app, I'm presenting the view controller again (in the exact same storyboard), using the following code: `self.navigationController.modalPresentationStyle = UIModalPresentationCurrentContext; [self presentViewController:storyboardVC animated:YES completion:^( // Clean up the navigation controller. self.navigationController.navigationBarHidden = YES; ]]`; The view controller that I'm presenting is the same in the storyboard as the view controller that I'm presenting to the storyboard (and embedding). When I launch the app, it says: \*\*\*

---

Terminating app due to uncaught exception 'NSInvalidArgumentException', reason: 'UIViewController has no view controller at storyboard index 4' I'm pretty sure it's because the view controller that I'm presenting in the code is not the same as the view controller that I'm presenting to the storyboard. How do I fix this? A: I believe that [self presentViewController:storyboardVC animated:YES completion:^{ should be: [self presentViewController:storyboardVC animated:YES completion:NULL]; Because the presentViewController:animated:completion: method will return immediately, if that is the completion block is already completed. If not, the completion block will be called after the animation is completed. Q: Is there a way to have certain conditions in a if statement that are associated with a variable? For example, if I wanted to add a new li to a list if the variable has an array with any of the first four values in it. var currentItems = "FOO", "BAR", "BAR", "BAR", "ZOO"; var newItem = "BAR"; var positions = ["first", "second", "third", "fourth"]; if(positions.indexOf(newItem) >= 0){ list.append(newItem); } 4bc0debe42
