Technical Field This disclosure relates to a device that is configured for a magnetic field and a method of operating the device. 2. Description of Related Art Known induction heating systems include a primary heating coil that is coupled to a heating load, such as a metal plate to be melted, and a secondary coil that is coupled to a field device. The field device includes a secondary heating coil that is adapted to couple directly to the primary heating coil, such that heat is transferred from the primary heating coil to the heating load, with heating being inductively coupled between the primary and secondary heating coils. In order to control temperature of the heating load, the field device applies a control signal to the secondary heating coil.1. Field of the Invention The present invention relates to an object obtaining apparatus that obtains a three-dimensional image of an object with a three-dimensional imaging apparatus, and a posture correction method for correcting posture of a 3D endoscope which is used for such an object obtaining apparatus. 2. Description of the Related Art Conventionally, there has been known a non-contact type three-dimensional imaging apparatus that obtains a three-dimensional image of an object with a three-dimensional imaging section. Examples of such three-dimensional imaging apparatus include a three-dimensional observation apparatus that displays a three-dimensional image and a three-dimensional measurement apparatus that performs three-dimensional measurement for an object. As an example of such a non-contact type three-dimensional imaging apparatus, there has been known an oblique cornea eye observing apparatus in which a cornea of an eye is irradiated with light emitted from a light source, and light reflected from the cornea is received by
