First impressions: Not bad. It's simple to use 77a5ca646e

ksFontViewer is a small-sized application that lists all installed fonts on your computer and lets you write custom text, in order to view it with different font styles. It's useful for web designers looking for ideas, as well as students who want to write and print projects, for example. Simple setup and interface Installing this tool takes minimal time and effort, thanks to the simple wizard steps. As far as the interface is concerned, ksFontViewer adopts a normal window with a well-structured layout, which doesn't include particular attractive graphical elements. However, it's easy to navigate. All installed fonts are loaded at program startup automatically, so you can explore the list of all font families and types. After selecting an entry from the list, the utility reveals sample text by applying the corresponding text. View fonts and write text It's possible to replace the sample text with your own, either by typing or pasting it from the Clipboard. If it's a longer text document, you can maximize the main application window to get a better view. As far as font settings are concerned, you can personalize the text color, increase or decrease the font size, as well as make it bold or italic, depending on your preferences. Unfortunately, the tool doesn't implement options for printing information, nor for exporting it to file as an image. Evaluation and conclusion It didn't put a strain on the machine's performance in our tests, thanks to the fact that it needed a low amount of resources to work properly. Unsurprisingly, it didn't hang, crash or prompt error dialogs. Although it hasn't been updated for a long time, it worked smoothly on newer Windows editions. Nevertheless, you can test ksFontViewer for yourself, since it's free to use. How to install Fiddler on your PC Fiddler is a Web Debugging Proxy that helps you understand your web apps, and find errors and security issues. It's a free tool for Windows with no registration required. Learn more How to install Hyper-V Manager on your PC Hyper-V Manager is a tool from Microsoft that helps manage Hyper-V, a platform that allows virtual machines to be run on Windows Server. Learn more How to install LanguageTool on your PC LanguageTool is a free utility that helps you find and fix errors in your code. With it, you can find spelling and grammatical errors in over 100 languages. Learn more

Evaluation and conclusion It didn't put a strain on the machine's performance in our tests, thanks to the fact that it needed a low amount of resources to work properly. Unsurprisingly, it didn't hang, crash or prompt error dialogs. Although it hasn't been updated for a long time, it worked smoothly on newer Windows editions. Nevertheless, you can test ksFontViewer for yourself, since it's free to use. ksFontViewer - fsFontViewer is a free utility developed by ksFontViewer that displays all installed fonts on the computer. The application allows you to replace the samples with your own text and save it to the clipboard. There's a few drawbacks. One disadvantage is the inability to customize font colors. You can only modify the entire text in one way, by changing the size, font style and color. The second drawback is the limited number of fonts and the fact that only the most commonly used are supported. fsFontViewer - dutFontViewer is a lightweight font viewer that lists all installed fonts on the computer and lets you add text, font color and font size to it in order to view it with different styles. The application has a simple user interface that does not include particular attractive
