Ford ids 110Â .Q: Is there an alternative to wait() in java? For the following code in Java, try { thread.join(); } catch (InterruptedException e) { } Is there an alternative way to make the Thread sleep? A: Just call Thread.sleep(milliseconds). No need to use join(), as it does it for you. If you need to be able to interrupt the thread, use a javax.swing.Timer or javax.swing.SwingWorker. A: I believe the method you are looking for is Thread.sleep(x). Here is the documentation. A: If you want to wait for the thread to finish executing and then continue, then you should use a method called join() where you pass the thread's current value to it. See join() method. In your case, since you want to pause the execution for a specific duration, you should use Thread.sleep(x) method which is already recommended by other developers. Launched by the government and industry in November last year, the Earth Observatory of Singapore (EOS) is a dedicated satellite facility that was launched last April. The satellite's primary objective is to collect, process, and display real-time high-resolution Earth imagery. This is so that the public can grasp a better understanding of Singapore's land, nature, and land-use patterns. While the satellite doesn't have a camera of its own, it is equipped with a variety of equipment to help collect and process imagery. These include two sensors: the Advanced Wide Field Infrared System (AWiFS) and the Fine-resolution Visible and Near Infrared Radiometer (FineVISIR). Together, these sensors collect and process
