or how to get free pokertracker 4 registration code macIn the related art, there is a known image forming apparatus. The image forming apparatus is capable of printing a plurality of types of data for each of pages. The image forming apparatus includes a personal computer, which controls the entire image forming apparatus, and a storage device. The personal computer reads printing contents of a certain page of data, which is stored in the storage device, and prints the certain page of data. When the data for each of the plurality of pages is stored in the storage

device, the personal computer which controls the entire image forming apparatus is required to receive information indicating which page of which type of data each page is, from the storage device which controls the image forming apparatus. As a result, a storage device that is coupled to the image forming apparatus, and a personal computer that is coupled to the storage device, are required to transmit and receive information. The operation for transmitting and receiving information may become complicated. Further, the storage device may include a buffer memory that temporarily stores print data. However, it is not possible to store the data for the pages which are to be printed in the buffer memory. In that case, the image forming apparatus is required to keep the print data temporarily stored in the buffer memory.
